_____

From the paper, I notice that AGWA is an open source software tool, just wondering where can I download the source code of AGWA? How can I do that? Thank you

Let me get back to you on this. I'm not sure if we're correctly using the term Open Source or if there is a more applicable term like Public Domain. Whatever the correct term may be, we would prefer not to make the source code as easily available as the compiled software because of any consequences that could arise as a result of any modifications made to it.

What would you like to use the code for?
